

Marco Rosenbaum

Junior Frontend Developer

I like the challenge to solve problems logically. I also like to build things. Building a program and always trying to improve it makes me feel like time is flying by. Enjoying what I do motivates me to continuously learn and strive to be the best version of myself as a developer.

Throughout my training, collaborating on projects with a team that shared the same passion was the most exciting part. Having also led teams, I understand the impact of a well-functioning team and, in my opinion, the most valuable aspect of teamwork is the mutual learning that occurs.
